RV aspect: description of VSDs

- Size
- Location
 - inlet
 - outlet
 - apical/trabecular
- Borders
 - Perimembranous
 - Muscular
 - Doubly committed & juxtaarterial

Associated anomalies
e.g. septal malalignment, integral part of malformation e.g. Fallot

Muscular VSD

Shape, size, visibility

Muscular inlet

www.rbht.nhs.uk/Morphology

Muscular VSD

Muscular outlet

AV conduction bundle not on VSD margin

www.rbht.nhs.uk/Morphology

Perimembranous VSD

Perimembranous VSD
(infracristal/Kirklin II & III, Kawashima type 2, Tatsuono type 2)

www.rbht.nhs.uk/Morphology

Perimembranous VSD

Perimemb. outlet VSD

www.rbht.nhs.uk/Morphology

Perimembranous VSD

Perimemb. outlet VSD

Compare with perimemb. inlet VSD

Perimemb. outlet

Proximity of outlet valve or inlet valves

Perimemb. inlet

www.rbht.nhs.uk/Morphology

Perimembranous VSD

Gerbode defect

Deficiency of leaflets of tricuspid valve → Inlet AV membranous septum

Deficient Aortic-membranous septum

Co-existing ventricular septal defect

Inlet ventricular membranous septum

'membranous septal defect'

Proximity to:

- Aortic valve
- Tricuspid valve
- Conduction system

www.rbht.nhs.uk/Morphology

Doubly committed and juxtaarterial VSD

Doubly committed and juxtaarterial VSD

(infundibular/supracristal/subpulmonary, Kawashima type 1, Tatsuono type 1)

www.rbht.nhs.uk/Morphology

Doubly committed and juxtaarterial VSD

DCJA VSD

Doubly committed and juxtaarterial VSD

Associated Aortic insufficiency - DCJA

PA

Aorta

RV

IVS

LV

IVS

IVS

AI

Tatsuno et al. Pathogenetic mechanisms of prolapsing aortic valve and aortic regurgitation with ventricular septal defect. Circulation; 1973

2 mechanisms:

1. Lack of anatomical support for the valve
2. Haemodynamic effects: L to R shunt thru' VSD during early systole

VSD: associated lesions

Septal malalignment: outlet

www.rbht.nhs.uk/Morphology

Royal Brompton & Harefield NHS Foundation Trust

VSD: morphology and nomenclature

- Location, number
- Size of defect
- The margins
- Proximity to important structures e.g. conduction system, aortic valve
- Associated malformations

Holes can have different shapes and sizes on RV and LV perspectives
