Royal Brompton & Harefield NHS Trust

### Aortic Arch Anomalies

#### Developmental aspects

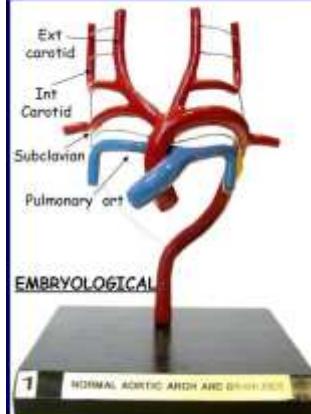

- The left arch
- The right arch
- The partial double arch
- The double arch
- The 5<sup>th</sup> arch
- Obstructions to flow
- Others

Imperial College

Royal Brompton & Harefield NHS Trust

### The aortic arch: development

rbhtnhsuk

[www.rbht.nhs.uk/morphology](http://www.rbht.nhs.uk/morphology)

Royal Brompton & Harefield NHS Trust

### Aortic Arch Anomalies

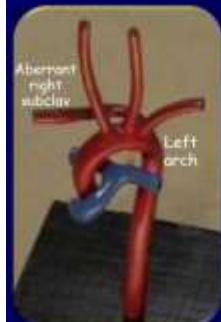

Left arch in fetus

Imperial College

[www.rbht.nhs.uk/morphology](http://www.rbht.nhs.uk/morphology)

Royal Brompton & Harefield NHS Trust

### Aortic arch malformations - Left arch + Ab right subclav

Abnormal branching

Imperial College

[www.rbht.nhs.uk/morphology](http://www.rbht.nhs.uk/morphology)

Royal Brompton & Harefield NHS Trust

## Right Arch

### Associated

with Fallot's tetralogy - 25%  
with Common Arterial Trunk - 50%

### Head and arm arteries

- mirror-imaged of normal left arch
- retroesophageal left subclavian artery

### Descending thoracic aorta

- Usually to right of spine
- Seldom to left of spine

Open to All

[www.rbht.nhs.uk/morphology](http://www.rbht.nhs.uk/morphology)

Royal Brompton & Harefield NHS Foundation Trust

## Aortic arch malformations - Right Arch

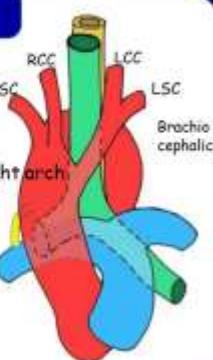

### Origins of head and arm arteries

- mirror-imaged of normal left arch

NORMAL LEFT ARCH

RIGHT ARCH

### Associated

with Fallot's tetralogy - 25%

with Common Arterial Trunk - 50%

## Right Arch, aberrant left subclavian artery

Vascular sling if left duct/ligament persists

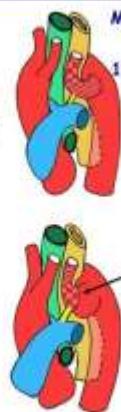

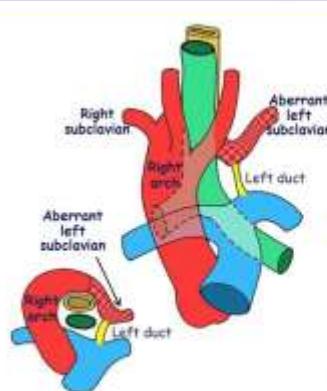

Open to All

[www.rbht.nhs.uk/morphology](http://www.rbht.nhs.uk/morphology)

Royal Brompton & Harefield NHS Foundation Trust

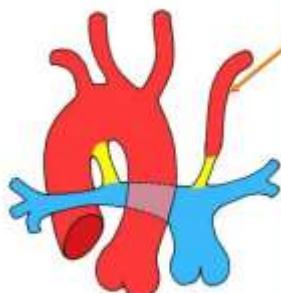

## Aortic arch malformations - Right Arch - Ab Left Subclav

More common than Left arch with Ab Rsc,  
12-15% of vasc.'rings'

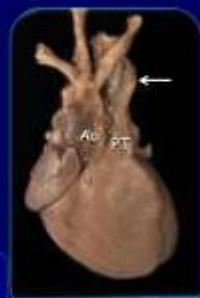

## Right Arch, bilateral ducts

Isolation of left subclavian artery

Or isolation  
with 1 duct

Open to All

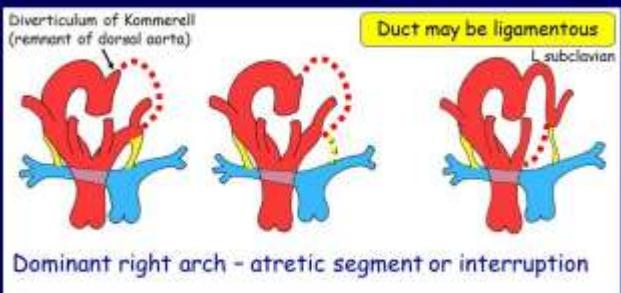

[www.rbht.nhs.uk/morphology](http://www.rbht.nhs.uk/morphology)

Royal Brompton & Harefield NHS Foundation Trust

## Partial double arch

Can be predominantly right or predominantly left

Diverticulum of Kommerell  
(remnant of dorsal aorta)

Dominant right arch - atretic segment or interruption

Open to All

[www.rbht.nhs.uk/morphology](http://www.rbht.nhs.uk/morphology)

Royal Brompton & Harefield NHS Foundation Trust

## Double Aortic Arch (ring)

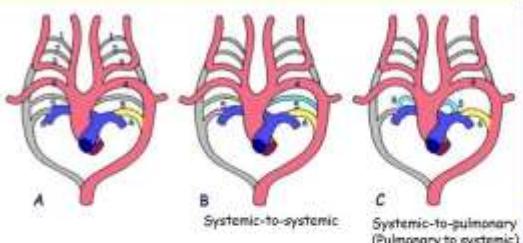

Royal College

[www.rbht.nhs.uk/morphology](http://www.rbht.nhs.uk/morphology)

Royal Brompton & Harefield NHS Trust

## Aortic Arch Anomalies: the fifth arch

Jewett V. JACC Imaging, 2012

Gerlis L et al Br Heart J, 1994

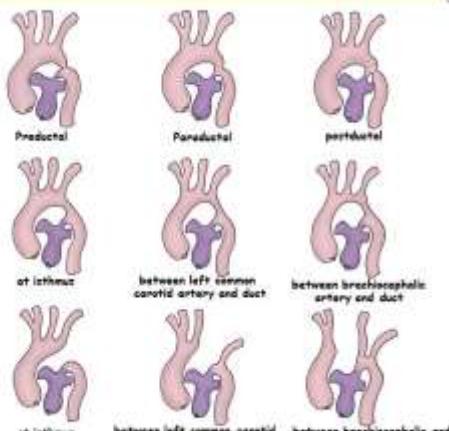

[www.rbht.nhs.uk/morphology](http://www.rbht.nhs.uk/morphology)

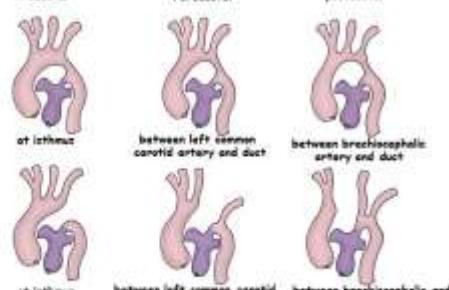

Royal Brompton & Harefield NHS Trust

## Obstruction to flow

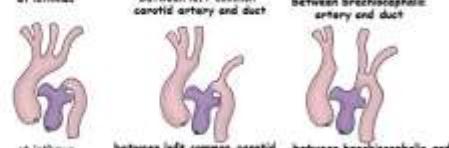

### Coarctation

### Tubular hypoplasia

### Interruption

[www.rbht.nhs.uk/morphology](http://www.rbht.nhs.uk/morphology)

Royal Brompton & Harefield NHS Trust

## Obstruction to flow

### Coarctation

#### Incidence:

3.4 to 9.8% of congenital heart disease

(An isolated lesion in approx 80% of incidence)

Royal College

[www.rbht.nhs.uk/morphology](http://www.rbht.nhs.uk/morphology)

Royal Brompton & Harefield NHS Trust

## Obstruction to flow: coarctation vs TH

### Morphological types

- **Tubular hypoplasia** - Long segment
- **Coarctation** - Discrete

Can occur in isolation but often co-exist

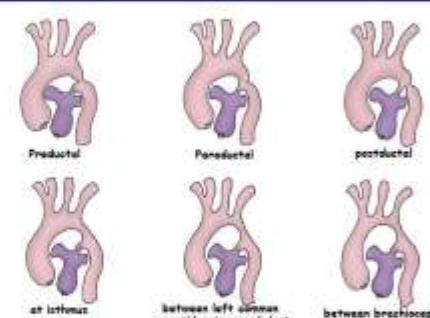

Neonate: Commonly associated with intracardiac malformations

[www.rbht.nhs.uk/morphology](http://www.rbht.nhs.uk/morphology)

Royal Brompton & Harefield NHS Trust

## Obstruction to flow: locations

### Coarctation

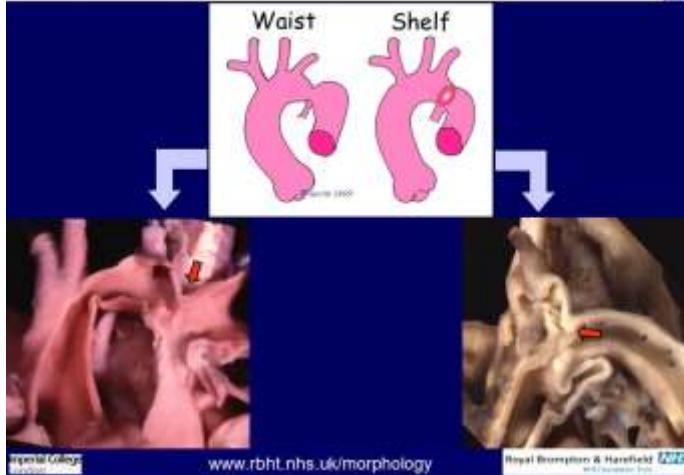

### Tubular hypoplasia

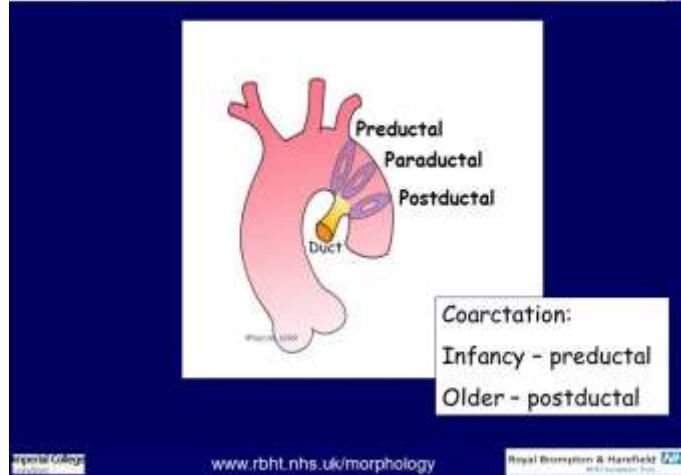

[www.rbht.nhs.uk/morphology](http://www.rbht.nhs.uk/morphology)

Royal Brompton & Harefield NHS Trust

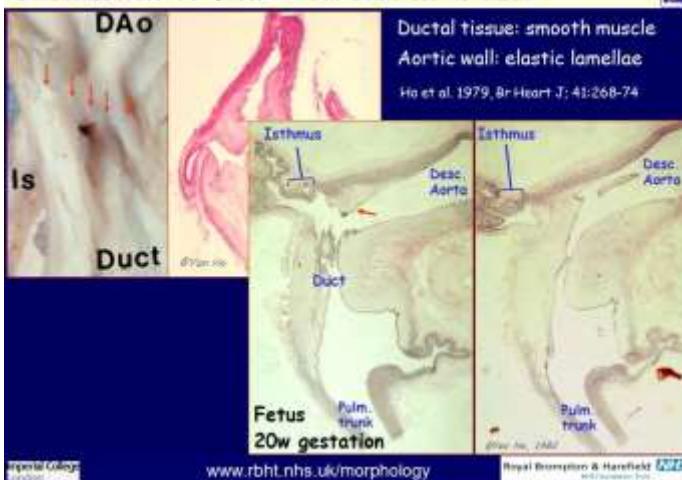

## Obstruction to flow: Coarctation

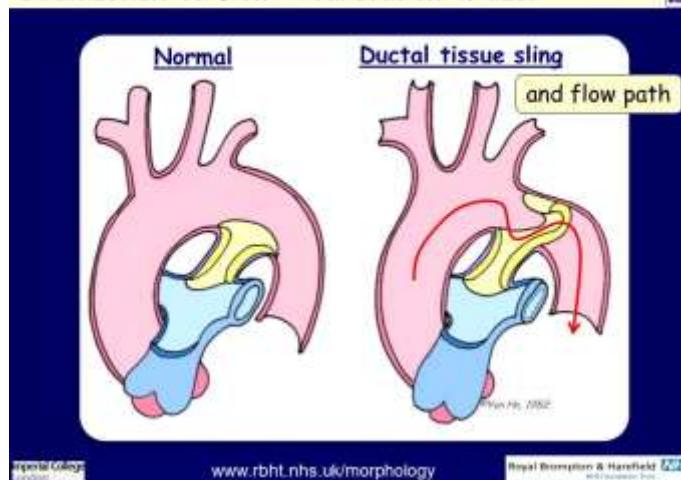

## Obstruction to flow: Coarctation location

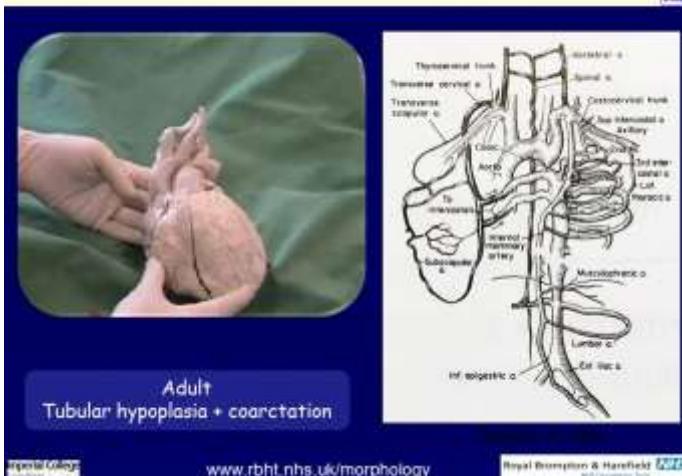

## Obstruction to flow: Coarctation & duct

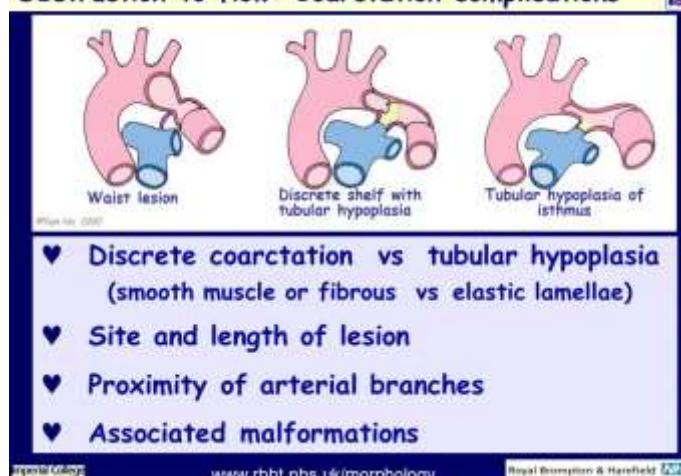

## Obstruction to flow: Coarctation & duct

## Obstruction to flow: Coarctation & duct

## Obstruction to flow: Coarctation complications

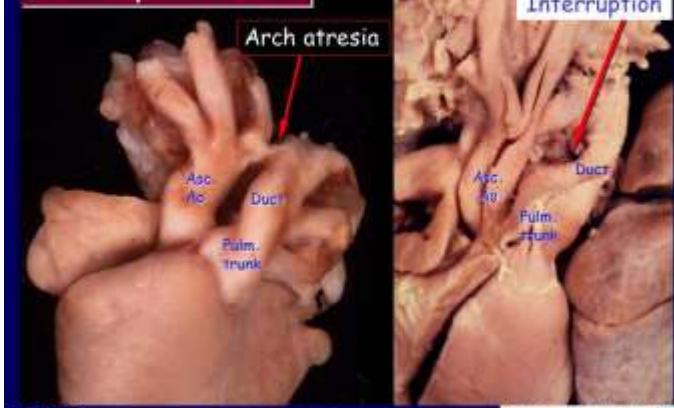

## Obstruction to flow: Arch Interruption

- Accounts for approximately 1.3% of critical congenital anomalies in infancy
- Highly lethal in first 2 weeks after birth
- A duct-dependent lesion

## Obstruction to flow: Arch Interruption

### Interruption of flow

Imperial College

[www.rbht.nhs.uk/morphology](http://www.rbht.nhs.uk/morphology)

Royal Brompton &amp; Harefield NHS Trust

Royal Brompton &amp; Harefield NHS Trust

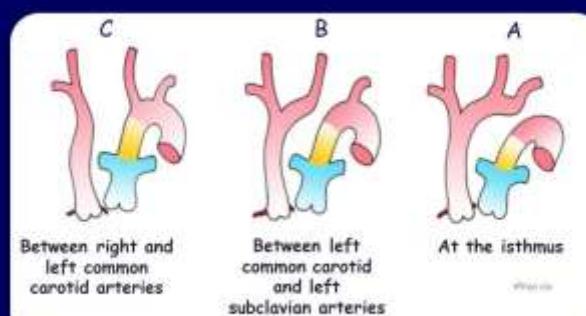

## Obstruction to flow: Arch Interruption

### Anatomic features

- Site of interruption ?
- Anomalous subclavian artery ?
- Ventriculo-arterial connections ?
- Associated lesions ?

## Obstruction to flow: Arch Interruption

### Interruption of flow

Imperial College

[www.rbht.nhs.uk/morphology](http://www.rbht.nhs.uk/morphology)

Royal Brompton &amp; Harefield NHS Trust

Royal Brompton &amp; Harefield NHS Trust

## Obstruction to flow: Arch Interruption

### Ventriculo-arterial connections

- Concordant
- Common arterial trunk
- Discordant
- Double outlet right ventricle

## Aortic Arch Anomalies

### The normal left arch

- Obstructions to flow
- Wrong side
- Wrong origin

### Ring or Sling or Loop ??

Tracheal/esophageal compression

Associated malformations!
